- Please identify brief points or message that you would like to highlight, and the marketing team will work that message into character constraints

Title: The Future of UC Practice due to COVID

Summary:

In this audio piece Andy, Miz, and Matthieu discuss the role Urgent and Immediate Care centers played during the past year with the Covid pandemic. Specifically their role as testing sites that helped alleviate the burden on Emergency Departments as well as augmenting the need for testing from a public health standpoint. They also look to the future and discuss what role Urgent and Immediate Care centers may play as we continue to battle with Covid 19 as well as what does the future of Urgent and Immediate care look like in the age of Covid. How can we get back to caring for the traditional healthcare needs of our patients while continuing to protect ourselves and our patients from Covid 19.

Main Talking Points:

- What have urgent cares turned into during the pandemic?
 - COVID testing centers
 - COVID eval and f/u clinics
 - A 'little bit' of urgent care
- How will the vaccine change things?
 - Reintroduction of typical UC volume
 - Cohorting of patients
 - PUI/COVID vs other (e.g. MSK, SSTI)
 - Vaccinated vs not
- Long term impacts
 - URI patients might always be treated differently, for-eval
 - Staff PPE/infection control requirements
